COMMENTS:

Evergreen intends to complete multiple zones in the Raton and/or Vermejo formations which are considered common supply. New and existing intervals will be perforated, fracture stimulated using 70Q N2 foam, low volumes of guar gel with breakers, and formation water with sand volumes of approximately 250,000 to 450,000 lbs of sand depending upon the number of feet of pay actually completed. If necessary, small volumes of low concentration acid will be used to clean up the perforations. After stimulation and cleanup the well will be returned to production utilizing pumps. It is anticipated that the spent stimulation fluids will be recovered during flow back and production operations. Proposed new gross interval is between 475' - 1469'. Water wells within ¼, ½, and 1-mile radius, wellhead elevations, water well elevations and expected distance to the well, found on the COGCC GIS Application, can be found on the attachment.
