Re: Colorado State #1-20 NWSE 20 19S 47W Kiowa County, CO.

Dear Mr. Gibson:

I have reviewed the downhole conditions of the Colorado State #1-20 in response to your letter of September 2, 1997. The Cheyenne and Dakota aquifers are not covered by cement and the stage cement job thru the DV tool at 2170' did not cover the Blaine formation with cement. If further recompletion attempts are made in this well the Commission will require that annular cement coverage be provided from 1300' up to 700' to protect the Cheyenne and Dakota formations. The Commission would allow 90 days to test and evaluate your Marmaton zone of interest before requiring the remedial cement work to be done.

Please contact me if I can be of further assistance.

Sincerely,

Dave Shelton  
Petroleum Engineer
