Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

While drilling on the Castor 7-59 10 Pad, 10 bbls of OBM were spilled within the secondary containment. The cellar overflowed due to improper flow line alignment while running casing. The job was stopped at the time the spill was discovered. It is estimated that 8 bbls of the spilled OBM have been recovered. The remaining 2 bbls will be recovered when the drilling rig moves off of location. Please see full incident report attached.
