17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Date of work _____

Well was drilled to TD 9918' without encountering commercial producing zones. Formation Tops are: Pierre - 100', Apache - 1380', Apache (2nd time) - 3840', Niobrara - 5286', Ft. Hays - 6576', Codell - 6695', Greenhorn - 7136', Dakota - 7580', Morrison - 8252', Entrada 9226', Sangre de Cristo - 9472', TD 9918'.

Casing: 20" conductor set at 58' & cemented to surface. 13-3/8" 54.5# K-55 set at 440' & cemented to surface w/400 sx. 9-5/8" OD 40# & 43# N-80 & K-55 set at 5844' & cemented w/250 sx Howco Lite & 200 sx regular = total 598 cubic feet. Drilled out w/8-1/2" bit.

Propose: To temporarily abandon as follows: Displace oil base mud in hole w/gel mud (8.7#/gal) & set following cement plugs: from 9475' to 9175' = 300' (top Sangre de Cristo & across Entrada); from 7600' to 7450' = 150' (across top Dakota); from 6100' to 5800' = 300' (in and out btm of 9-5/8" csg). We do not propose to pull the 9-5/8" csg at this time. Clean location & install dry hole marker. We propose to temporarily abandon until a decision is made to sidetrack the hole below the 9-5/8" csg, or to complete plugging and abandonment and probably pull the 9-5/8" csg. We expect that this decision would be made by July 1977, possibly subsequent to drilling another well in the area.

This procedure was verbally approved by Mr. D. V. Rogers, Colorado Oil & Gas Conservation Commission, and Mr. F. W. Guynn, U.S.G.S. on 9/07/76.
