Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Site was excavated and sampled in August 2021. Please see attached Table, Figure, and Analytical Data.

Operator performing pigging operations in South Parachute, PN20 pad, found natural gas bubbling up through standing recent storm water at the pig launcher. Operator isolated the pad/line and blew it down. Summit investigated and contracted a vac truck to remove the standing storm water. Delineation of soil impact was still ongoing as of the initial reporting.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was not encountered during activities at this Site.

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Summit plans to delineate the remaining inorganic exceedances and resample for the missing Table 915-1 analytes at this Site in Q3 2023. Once completed, Summit will submit results on a supplemental Form 27.

After delineation is complete, Summit intends to submit a 915b reclamation plan for the remainder of the exceedances at this Site. If the 915b is not approved, Summit will conduct additional background soil sampling to better understand the natural concentrations of inorganics in the soil and produced water at this site.
