**General Comment:**

Any Corrective Actions from previous Inspections that have not been addressed are still applicable. On 8/3/23, C-ECMC staff, Kris Neidel was on location to inspect the State 3X Well. The well was SI at the time of inspection. The following was observed. Pumping unit on a steel base. Well has a 4 wire fence. There is a 200bbl tank that has a dirt berm secondary containment. It appears that this is the Poly flowline that is coming from the 12-1 well. There is no Sign identifying this tank as related to the 12-1 well. There is an old pulling unit at the wellhead. The rig is laid down on the truck. There is other workover debris and trash at the well. There is a Warning Letter, doc 2193064 in the well file for a lack of MIT on this TA well. To date (8/24/2023) there is no record of this well being MIT'd. See attached Photos.
