COMMENTS:

This well started mitigation in July 2023. The pre-stim bradenhead test conducted 07/13/2023 (Form 17 doc# 403468822) reported 100 psi. After diagnostics were conducted, it was determined that the pressure requires mitigation. Crestone implemented a blowdown strategy to immediately mitigate the pressure during stimulation operations. Crestone did not witness communication during the course of stimulation and will follow up with another Bradenhead test within 60 days of first sales, following no less than 7 days of shut in. Once the well turns in line, Crestone plans to place a fugitive gas destruction device at the wellhead to further draw down the Bradenhead pressure. Within 6 months of the pre-stim Bradenhead test, Crestone will compile pressure, test, and sample data to draw conclusions on the overall success of the PMP and determine future plans for this well.
