Comment This location does not comply with Rule 1003.b. Operator has failed to perform interim reclamation to reduce disturbance areas only reasonably needed for production operations. The first production date for the last well to go on production was 11/13/2019; therefore, interim reclamation should have been completed by 5/13/2020. This location is over three (3) years out of compliance.

Corrective Action Perform reclamation in accordance to Rule 1003. Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of reference area levels. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until the location meets Rule 1003 standards.

The corrective action date is the date the location was observed out of compliance.

COGCC Comments

Comment	User	Date
ECMC staff, Chris Binschus, contacted and communicated the observations of the inspection to an Operator representative on August 29, 2023. Staff indicated that the inspection would likely be delayed due to a database migration and staff PTO. On September 11, 2023, Staff received an update from the Operator stating that interim reclamation is scheduled for the month of September. There were also discussions about the requirement to recontour the interim reclamation areas. It appears the Operator's fill material is buried underneath the production areas; therefore, the Operator will be required to import fill material to comply with Interim Reclamation rules.	binschusc	09/12/2023
