Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During daily trending of well performance, the lease operator observed production loss on the 6A-32 well. After isolating the flowline and conducting a pressure test, the lease operator determined that the flowline had failed underground. Attempts were made to locate the exact location of the leak but were unsuccessful. A hydrovac will be brought in to daylight typical points of failure. Until that happens, the line will de-energized, isolated, and locked out.
