INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

The City and County of Denver has plugged the BOX ELDER K 2 well and decommissioned the BOX ELDER K 1-3 tank battery and associated flowlines and production equipment. Initial assessment and sampling occurred on November 14, 2022, December 5, 2022, and January 5, 2023, and indicated soil impacts above COGCC standards in the area of the former pit tank as described in the Site Investigation Report section below. Impacts in the pit tank area were excavated and transported off site. Groundwater was observed at a depth of approximately 25 feet below ground surface and one groundwater sample was collected.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Initial soil samples were collected for laboratory analysis of COGCC Table 915-1 constituents. One soil sample was collected from the wellhead, five soil samples from flowline segments, one soil sample from base of pit tank, one soil sample from former separator location, and one soil sample from onsite incinerator. Elevated pH, SAR, arsenic, and TPH were detected in the sample collected from the former pit tank. Prior to collecting initial soil samples, soil was field screened using a PID and visual/olfactory observations.

Following the initial soil sampling, excavation of the impacted soil occurred in July 2023 and confirmation soil samples were collected from the base and four sidewalls of the excavation.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was encountered during excavation on 7/18/2023. One groundwater sample was collected at a depth of 25 feet below ground surface. No impacts over the COGCC Table 915-1 standard were detected in the groundwater sample.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

No surface water sampling was conducted.

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Field personnel performed a visual/olfactory inspection of the site.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Background soil samples were collected from nearby, non-impacted native soil to establish background concentrations. Background samples were analyzed for Table 915-1 constituents. Background samples indicated pH values outside of the COGCC Table 915-1 range. Also, background samples indicated arsenic values above the COGCC Table 915-1 standards. It is requested that background concentration be considered when evaluating the site for final closure.
