COMMENTS:

Lack of rig availability and road conditions prohibit conducting a Form 21 MIT within the timeframe that the next MIT is due. Also, history has shown that inclement weather will prohibit access to this site soon and getting a rig in to the location will not be possible until Spring/early summer. The annual bradenhead test was conducted on 9/20/2023. There was 0 pressure on the bradenhead. Monthly bradenhead tests have also shown 0 psi on the bradenhead. Because of the bradenhead tests, no pressure swings, nor influx of fluids, we believe this well has mechanical integrity. We will continue monitoring the bradenhead on a monthly basis as well as monitor for pressure swings and/or influx of fluids. We believe this well demonstrates mechanical integrity which protects health, safety, welfare, the environment and wildlife resources. An MIT is not planned for this well however it will be plugged and abandoned in 2024.

Operator Comments:

An MIT is due on this well 11/20/2023 but we do not have a rig available for a bit and do not think we can get to this well due to weather when we might have a rig available. We plan to P&A this well next spring/early summer and will submit a P&A notice of intent. We request to hold off on the MIT and go straight to P&A by next spring/summer.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
