Environmental**Spills/Releases:**

Type of Spill: _____

Estimated Spill Volume: _____

Comment: Kerr-McGee was asked to re-enter the well. Soil impacts were discovered and subsequently cleaned up. However some impacts remain in situ. The owner/operator of the well is required to submit a Form 19 to the State/ECMC.

Corrective Action: Further clean up of soil impacts will be required by the owner/operator per Rule 912.a.

Spill/Remediation:

Comment: There is currently an open pit/excavation that KMG is willing to fill until the remaining impacts can be remediated down the road. The Open pit/excavation was filled at the behest of the landowner who needs to plant his field in the next few weeks. A plastic barrier has been placed at the base of pit to delineate where the impacted soil starts.

COGCC Comments

Comment	User	Date
ECMC staff were unable to take a sample at the base of the open pit as it was full of water. A water sample was not able to be procured either due to the dead wildlife in the water. However, staff were able to take PID readings at each of the four side walls, albeit not deep down where the impacts remain due to the water level. For this reason the field screenings all came back negative. The spoil pile was also field screened. KMG was able to take a sample at the base of the open excavation prior to the ECMC's inspection and the results can be found on the ECMC database. KMG is willing to fill the open hole with clean fill dirt and will be doing this in the next couple of weeks as the LO wants to be able to plant his field in that time. A plastic liner will be placed at the bottom of hole to delineate where the impacts begin for aid in future clean up.	robinsotl	08/31/2023
