**COMMENTS:**

After a Form 17 Bradenhead Test (Doc #403478558), the N PARACHUTE EF03D D19B 595 (API: 05-045-16981) has been identified as having Continuous Flow on the bradenhead after the 30-minute blowdown test. The bradenhead test shows an initial shut-in bradenhead pressure of 200 psi with 15 psi at the expiration of the 30-minute blow-down. Caerus Oil & Gas proposes to install a pressure transducer, connected to the automation/SCADA system on the bradenhead to continuously monitor the pressure, and ensure it does not increase and approach the max allowable pressure (606 psi). Note: static pressures on the production casing string during the bradenhead blow-down test confirm casing integrity is not compromised.
