**Subject:**      **Decommissioning Field Activities**  
**L9 –Hill 9-14**  
**Mamm Creek Field**  
**Garfield County, Colorado**

Dear Mr. Janicek:

WSP USA Inc. (WSP), on behalf of Caerus Piceance LLC (Caerus), completed field soil screening, and confirmation and site-specific background soil sampling associated with the decommissioning of production well Hill 9-14 [American Petroleum Institute (API) Number (#) 045-09356] and associated infrastructure (flowlines) to the HILL-67S92W9NWSW (Location ID: 334844), also known as the L9 pad location (Site). Field investigation activities were completed to confirm if impacts associated with the production well and associated infrastructure were present prior to decommissioning of the infrastructure. All associated field decommissioning work was completed per the Colorado Oil and Gas Conservation Commission (COGCC) Rule 913.c.(9): *Decommissioning of Oil and Gas Facilities*. This report of work completed (ROWC) documents all field investigative work completed during the second quarter of 2023 and at the Site to date under Remediation Project Number (RPN) 28568. The Site is located in the Caerus' Mamm Creek area of operation in Garfield County, Colorado (Figure 1).

## **SOIL SAMPLING ACTIVITIES – L9 – HILL 9-14**

On April 13, 2023, a WSP geologist conducted field soil screening, and confirmation and site-specific background soil sampling activities associated with the decommissioning of production well Hill 9-14 (API# 045-09356) and associated production equipment. Western Slope Oilfield Services, LLC of Rifle, Colorado was contracted by Caerus to provide hydro-vacuum services to assist with the confirmation soil sampling activities at the Site. Three potholes were advanced using the hydro-vacuum truck (hydro-vac). The first pothole location [20230413-L9-(FC-WH-HILL-9-14)@6] was advanced to 6 feet below ground surface (bgs) immediately adjacent to the wellhead. A sandstone shelf was encountered at 6 feet bgs and the pothole was unable to be advanced further vertically. The second pothole [20230413-L9-(FC-FL1)@6] was advanced behind the separator production unit at the “dogleg” flowline junction to a depth of 6 feet bgs. The third pothole [20230413-L9-(FC-FL2)@5] was advanced between the flowline riser and the separator. Using a hand auger, investigative soil samples immediately adjacent to the production well were collected and screened at each 2-foot interval from 2-feet bgs to the pothole terminus at 6 feet bgs. The flowline riser and “dogleg” flowline junction investigative grab soil samples were collected using the hand auger directly beneath the 90-degree bends in the flowlines and screened at depths of 5 feet and 6 feet bgs, respectively. Field soil screening and investigative confirmation soil sampling activities were performed by a WSP geologist who inspected the soils for the presence or absence of petroleum hydrocarbon odor and/or staining. The soils were characterized by visually inspecting the soil and field screening the soil head space using a handheld photoionization detector (PID) to monitor for the presence or absence of volatile organic compounds (VOCs). The PID head space screening results are summarized in the table below.

### Field Soil Screening Results – April 13, 2023

Sample ID	PID (ppm)	Notes	Submitted for Analysis
20230413-L9-(FC-WH-HILL-9-14)@2	0.1	No Odor, No Staining	No
20230413-L9-(FC-WH-HILL-9-14)@4	2.6	Hydrocarbon Odor, Staining	No
20230413-L9-(FC-WH-HILL-9-14)@6	2.8	Hydrocarbon Odor, Staining	Full Table 915-1
20230413-L9-(FC-FL1)@6	0.1	No Odor, No Staining	Full Table 915-1
20230413-L9-(FC-FL2)@5	0.1	No Odor, No Staining	Full Table 915-1

Key:

PID – photoionization detector

ppm – parts per million

In addition, four site-specific background soil samples were collected from two hand auger locations to the east and west of the pad location from comparable, nearby, non-impacted, native soil per COGCC Rule 915.e.(2). D. The site-specific background sample depths ranged from 0.5-1 feet bgs to 2-2.5 feet bgs.

All soil samples were placed in clean laboratory-prepared containers and submitted to Pace Analytical of Mount Juliet, Tennessee for analysis. The three investigative confirmation soil samples 20230413-L9-(FC-WH-HILL-9-14)@6, 20230413-L9-(FC-FL1)@6, and 20230413-L9-(FC-FL2)@5 were submitted for all constituents listed in COGCC Table 915-1. The site-specific background soil samples were submitted for the analysis of COGCC Table 915-1 metals, sodium adsorption ratio (SAR), electrical conductivity (EC), pH, and boron (water soluble). All soil analytical results will be evaluated under the Protection of Groundwater Soil Screening Level Concentrations (PGSSLCs). The investigative confirmation soil sample locations and site-specific background soil sample locations from the investigative activities completed on April 13, 2023 are depicted in the attached Figure 2. A photographic log of the investigative activities conducted at the Site on April 13, 2023 is included in Enclosure A.

### FIELD SOIL SCREENING ACTIVITIES – L9 – HILL 9-14

On May 18, 2023, a WSP geologist returned to conduct final soil field screening activities associated with decommissioned production flowline dogleg (dumpline/sales line) located behind the separator and the flowline into the separator associated with planned decommissioning of production well Hill 9-14 to confirm the presence or absence of hydrocarbon impacts. Using a spade shovel, all sidewalls and base of each excavation footprint immediately beneath the above mentioned abandoned infrastructure were characterized using visual and olfactory observations, and field screened for volatile organic compounds using a PID. Inside the abandoned production flowline dogleg (dumpline/sales line) excavation, two soil samples were field screened from the excavation base immediately beneath the former dumpline and sales line at total depths of 5.5 feet bgs. Inside the abandoned flowline excavation footprint which connected the separator to the well, one soil sample was field screened from the excavation base directly beneath the exposed flowline (90-degree bend) at a total depth of 5.5 feet bgs. Excavation sidewalls associated with the decommissioned production equipment were field screened in all cardinal directions at total depths ranging from 5 feet to 5.5 feet bgs. To ensure representative soil samples were collected, prior to field screening, at least six inches of soil was removed from each sampling surface. Based on field screening values, visual and olfactory observations, no impacts were observed beneath or within the excavated abandonment footprints associated with the production well infrastructure (dumpline/sales line and flowline) locations. The field soil screening locations are depicted in the attached Figure 3.

### Field Soil Screening Results – May 18, 2023

Sample ID	PID (ppm)	Notes	Submitted for Analysis
20230518-L9-(WW)@5.5	1.2	No Odor, No Staining	No
20230518-L9-(NW)@5.5	0.5	No Odor, No Staining	No
20230518-L9-(EW)@5	0.1	No Odor, No Staining	No
20230518-L9-(SW)@5.5	0.3	No Odor, No Staining	No
20230518-L9-(FC-DL)@5.5	8.4	No Odor, No Staining	No
20230518-L9-(FC-SL)@5.5	10.0	No Odor, No Staining	No
20230518-L9-(WW)@5.5	0.0	No Odor, No Staining	No

ppm – parts per million

A photographic log of the decommissioned production flowline dogleg (dumpline/sales line) located behind the separator and the flowline into the separator of the activities conducted at the Site on May 18, 2023, is included in Enclosure A.

### SOIL SAMPLING ACTIVITIES – L9 – HILL 9-14

On July 20, 2023, WSP personnel conducted field soil screening and confirmation soil sampling activities associated with the decommissioning of production well Hill 9-14 (API# 045-09356) to confirm if hydrocarbon impacts were present post decommissioning of the well. Using a spade shovel five confirmation soil samples were collected from the base and sidewalls in each cardinal direction of the wellhead. One soil sample was collected and field screened from the base of the former wellhead at a total depth of 5 feet bgs and four confirmation soil samples were field screened and collected from the excavation walls in each cardinal direction at a total depths of 5 feet bgs. To ensure representative soil samples were collected, prior to sample collection and field soil screening, at least six inches of soil was removed from the sampling surface. Field soil screening and investigative confirmation soil sampling activities were performed by a WSP geologist who inspected the soils for the presence or absence of petroleum hydrocarbon odor and/or staining. The soils were characterized as previously described. In addition, one five-point composite soil sample 20230720-L9-(STOCK) was collected from the excavated soil removed from around the areas of decommissioned production wells Hill 9-12A and Hill 9-14. The PID head space screening results are summarized in the table below.

### Field Soil Screening Results – July 20, 2023

Sample ID	PID (ppm)	Notes	Submitted for Analysis
20230720-L9-(BASE-HILL 9-14)@5	3.9	No Odor, No Staining	Full Table 915-1
20230720-L9-(SW-HILL 9-14)@5	3.7	No Odor, No Staining	Full Table 915-1
20230720-L9-(EW-HILL 9-14)@5	3.4	No Odor, No Staining	Full Table 915-1
20230720-L9-(NW-HILL 9-14)@5	4.2	No Odor, No Staining	Full Table 915-1
20230720-L9-(WW-HILL 9-14)@5	8.3	No Odor, No Staining	Full Table 915-1
20230720-L9-(STOCK)	3.0	No Odor, No Staining	Full Table 915-1

Key:

PID – photoionization detector

ppm – parts per million

All confirmation soil samples were placed in clean laboratory-prepared containers and submitted to Pace for laboratory analysis of COGCC Table 915-1 analytes. All soil analytical results will be evaluated under the PGSSLCs. A photographic log of the decommissioned wellhead field sampling activities conducted at the Site on July 20, 2023, is included in Enclosure A. A site map depicting the decommissioned wellhead and stockpile confirmation soil sample locations is include as Figure 4.

## ANALYTICAL RESULTS – L9 – HILL 9-14

Laboratory analytical results of the three investigative confirmation soil samples collected at the Site on April 13, 2023, indicate exceedances of the COGCC Table 915-1 Cleanup Concentrations (CCs) and PGSSLCs. The documented exceedances for each confirmation sample are summarized in the table below.

### Summary of Confirmation Soil Analytical Exceedances – April 13, 2023

Confirmation Soil Sample ID	COGCC Table 915-1 Contaminants of Concern	Units	COGCC Protection of Groundwater Soil Screening Level Concentrations	Confirmation Soil Sample Concentration
20230413-L9-(FC-WH-HILL-9-14)@6	Arsenic	mg/kg	0.29 (M)	<b>3.40</b>
	Barium	mg/kg	82 (M)	<b>16,200</b>
	1-methylnaphthalene	mg/kg	0.006 (R)	<b>0.0128</b>
	2-methylnaphthalene	mg/kg	0.019 (R)	<b>0.0328</b>
	Naphthalene	mg/kg	0.0038 (R)	<b>0.00754</b>
20230413-L9-(FC-FL1)@6	Arsenic	mg/kg	0.29 (M)	<b>5.31</b>

	2-methylnaphthalene	mg/kg	0.019 (R)	<b>0.0249</b>
	Naphthalene	mg/kg	0.0038 (R)	<b>0.00680</b>

Key:

mg/kg - milligrams per kilogram

BOLD - indicates result exceeds the COGCC protection of groundwater soil screening concentration level

M - maximum containment level

R - risk based

COGCC - Colorado Oil and Gas Conservation Commission

TPH - total petroleum hydrocarbons

All other analytes were either below the laboratory method detection limit (MDL) or within the COGCC Table 915-1 PGSSLCs. However, it should be noted that the laboratory MDL for chromium (VI) is 0.255 mg/kg, which is greater than the COGCC Table 915-1 PGSSLC of 0.00067 mg/kg. The laboratory analytical reports are included in Enclosure B and the results are summarized in Table 1. The soil analytical exceedances of the wellhead confirmation soil samples collected on July 20, 2023 are shown on Figure 5.

## CONCLUSIONS – L9 – HILL 9-14

Based on the analytical data provided herein from the investigative decommissioning sampling activities completed to date, there are remaining COGCC Table 915-1 exceedances of arsenic, barium, cadmium, selenium, total petroleum hydrocarbon (TPH), 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene associated with decommissioning of production well Hill 9-14 (API# 045-09356), remaining COGCC Table 915-1 exceedances of arsenic, barium, selenium associated with the decommissioned flowline dogleg (dumpline/sales line) located behind the separator [20230413-L9-(FC-FL1)@6)], and remaining COGCC Table 915-1 exceedances of arsenic, barium,

selenium, and pH associated with the associated the decommissioned flowline (into the separator) [20230413-L9-(FC-FL2)@5].

WSP recommends that Caerus continue with source removal of soil from the production well Hill 9-14 (API# 045-09356) when scheduling allows. Source removal will include the removal of lateral impacts from the north sidewall of the current wellhead excavation extent. Prior to any additional field work, WSP recommends that Caerus request the COGCC Director per Rule 915 e.(2)C. to sample under a reduced analytical suite for barium, cadmium, TPH, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene.

Reference Supplemental Form 27 Document Number 403401949 for request to the Director for relief of contaminants of concern which include arsenic and pH per COGCC Rule 915 e.(2)C. (Figure 6).

Please contact us at (970) 618-4514 or (970) 658-7025 if you have any questions regarding this report or require additional information.

**NOTES:**

BOLD - indicates result exceeds the COGCC protection of groundwater soil screening level concentration.

Highlight - indicates that sample MDL exceeds COGCC protection of groundwater soil screening level concentration

COGCC - Colorado Oil and Gas Conservation Commission

EC- electrical conductivity

mg/l - milligrams per liter

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimete

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MDL - method detection limit

MCL - maximum contaminant level (M)

M- MCL based

## NOTES:

BOLD - indicates result exceeds the COGCC protection of groundwater soil screening level concentration.

Highlight - indicates that sample MDL exceeds COGCC protection of groundwater soil screening level concentration.

COGCC - Colorado Oil and Gas Conservation Commission

EC- electrical conductivity

mg/l - milligrams per liter

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimete

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MDL - method detection limit

MCL - maximum contaminant level (M)

M- MCL based

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Sample Narrative:

OS: Surrogate failure due to matrix interference

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
RDL	Reported Detection Limit.	2 Tc
Rec.	Recovery.	3 Ss
RPD	Relative Percent Difference.	4 Cn
SDG	Sample Delivery Group.	5 Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	6 Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	7 GI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	8 AI
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	9 Sc
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier

### Description

B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
RDL	Reported Detection Limit.	<sup>2</sup> Tc
Rec.	Recovery.	<sup>3</sup> Ss
RPD	Relative Percent Difference.	<sup>4</sup> Cn
SDG	Sample Delivery Group.	<sup>5</sup> Sr
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>6</sup> Qc
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>7</sup> GI
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	<sup>8</sup> AI
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	<sup>9</sup> Sc
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier

### Description

E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
T8	Sample(s) received past/too close to holding time expiration.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
RDL	Reported Detection Limit.	<sup>2</sup> Tc
Rec.	Recovery.	<sup>3</sup> Ss
RPD	Relative Percent Difference.	<sup>4</sup> Cn
SDG	Sample Delivery Group.	<sup>5</sup> Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>6</sup> Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>7</sup> GI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>8</sup> AI
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	<sup>9</sup> SC
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier      Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.
V3	The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
RDL	Reported Detection Limit.	<sup>2</sup> Tc
Rec.	Recovery.	<sup>3</sup> Ss
RPD	Relative Percent Difference.	<sup>4</sup> Cn
SDG	Sample Delivery Group.	<sup>5</sup> Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>6</sup> Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>7</sup> Gl
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>8</sup> Al
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	<sup>9</sup> Sc
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier      Description

J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
