Description of Corrosion Protection:

Crestone pipelines are covered in a protective external coating. Flowlines are subject to thorough inspections and fabrication standards during installation to minimize coating and pipe defects. Crestone maintains a chemical program to reduce internal corrosion. If a flowline is found to lack integrity, Crestone will investigate, report, and remediate any spills in accordance with the 900 series rules.

Description of Integrity Management Program:

Crestone flowlines are pressure tested prior to placing flowlines into service. Flowlines are tested on an annual basis in accordance with COGCC 1104 series rules. If a flowline is found to lack integrity, Crestone will investigate the root cause, as well as report and remediate any spills in accordance with the 900 series rules. All repairs will be completed in accordance with COGCC 1102 Series rules.

**Description of the construction method used for public by-ways, road crossings, sensitive wildlife habitats, sensitive areas, and natural and manmade watercourses (i.e., open trench, bored and cased, or bored only), if applicable.**

The majority of flowlines are not near any known and defined public receptors or road crossings. Those that are, county permits are acquired prior to construction of county road crossings. Permit conditions contain minimum construction requirements.

**OPERATOR COMMENTS AND SUBMITTAL**

Comments Form 44 REGISTRATION submitted to report previously constructed flowlines and/or updated GIS data as a system. Full list of lines to be registered attached.  
Recent pressure tests for the registered lines are attached. In some cases, there is not a pressure test as the line was constructed and/or was placed out of service prior to the 1100 series rulemaking.  
GIS data attached.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.
