General Comment:

This is a Construction and Stormwater Inspection for Location ID (461821). This is also a follow-up inspection to FIR (doc #708200165) and FIRR (doc #403395809) to document compliance with previous corrective actions.

LocationOverall Good: ☐

Emergency Contact Number:

Comment: Corrective Action: Date: **Good Housekeeping:**

Type	TRASH		
Comment:	Previous inspection (doc #708200165) noted trash throughout the location. Operator submitted FIRR (doc #403395809) and provided photo documentation that trash had been removed. However, during this inspection, significant trash was observed throughout the location, including outside of the disturbance areas (e.g. off location). Refer to attached inspection photos for examples.		
Corrective Action:	Comply with Rule 606 and remove all trash, including any trash that has blown off location. The location will remain out of compliance until the corrective action has been resolved.	Date:	11/02/2023
Type	OTHER		
Comment:	Stained soil observed on the southern portion of the production/drilling area. Refer to attached inspection photos.		
Corrective Action:	Properly dispose of oily waste in accordance with 905.e. The location will remain out of compliance until the corrective action has been resolved.	Date:	11/02/2023

Comment

This location does not comply with Reclamation rules. Rule 1002.c. states all stockpiled soils shall be protected from degradation due to contamination, compaction and, to the extent practicable, from wind and water erosion during drilling and production operations. Best management practices to prevent weed establishment and to maintain soil microbial activity shall be implemented.

The topsoil stockpile and perimeter of the location has significant weed cover- Russian thistle and Kochia- with no perennial vegetation that would compete with the weedy vegetation and generally work to decrease weed growth. It appears the undesirable vegetation has been previously mowed, however, this is not a substitute for establishing desirable vegetation.

Corrective Action

Comply with Rule 1002.c. Best management practices to prevent weed establishment shall be implemented. Control, manage, and prevent weedy, annual vegetation on all topsoil stockpiles. If reseeding is an option for long-term protection and stabilization of topsoil, then the next favorable seeding opportunity shall be conducted. The location will remain out of compliance until the corrective action has been completed.

<p>Comment: This location does not comply with Rule 1002.f. It appears that previous stormwater issues have been addressed through repairs/maintenance of control measures and hydro seeding to stabilize bare/exposed soils. However, the following stormwater issues were observed during this inspection- the culvert at the location entrance has been buried or has been removed, the vehicle track out pad is filling with sediment and requires maintenance, and the eastern side of the location has equipment within the stormwater ditch and evidence of unstabilized soils. Additionally, erosion degradation is occurring around the sediment basin near the NE corner. Refer to attached inspection photos.</p> <p>Corrective Action: Immediately install or repair required BMPs per Rule 1002.f. in accordance with good engineering practices. The location will remain out of compliance until the corrective action has been resolved.</p> <p>Date: 11/02/2023</p>						
<p>Pits: <input type="checkbox"/> NO SURFACE INDICATION OF PIT</p>						

COGCC Comments

Comment	User	Date
Per Rule 1002.f., oil and gas operators shall implement and maintain Best Management Practices (BMPs) at all oil and gas locations to control stormwater runoff in a manner that minimizes erosion, transport of sediment offsite, and site degradation. BMPs shall be maintained until the facility is abandoned and final reclamation is achieved pursuant to Rule 1004. Operators shall employ BMPs, as necessary to comply with this rule, at all oil and gas locations, including, but not limited to, well pads, soil stock piles, access roads, tank batteries, compressor stations, and pipeline rights of way. BMPs shall be selected based on site specific conditions, such as slope, vegetation cover, and proximity to water bodies, and may include maintaining in-place some or all of the BMPs installed during the construction phase of the facility. Where applicable based on site-specific conditions, operators shall implement BMPs in accordance with good engineering practices.	edwardsond	11/06/2023
