COMMENTS:

Original bradenhead test performed 6/23/22 had 95psi surface casing pressure, which bled down immediately, indicating very small volume, and built no pressure for remainder of test. Casing was shut in for 29 days and repeated test on 7/22/22 and found no pressure on surface casing, no pressure built, no flow observed for remainder of test. Will continuously monitor during stimulation operations and subsequent 30-day monitoring with flowback. Verdad requests resuming normal monitoring and annual bradenhead reporting.
