## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

Site was excavated and sampled in August 2021. Please see attached Table, Figure, and Analytical Data.

Operator performing pigging operations in South Parachute, PN20 pad, found natural gas bubbling up through standing recent storm water at the pig launcher. Operator isolated the pad/line and blew it down. Summit investigated and contracted a vac truck to remove the standing storm water. Delineation of soil impact was still ongoing as of the initial reporting.

**OPERATOR COMMENT**

This Site was drilled and sampled in September 2023 to delineate inorganic impacts identified in the original excavation. Three borings were advanced in and around the excavation area (SB01 - SB03). Analytical results from these borings indicate that the SAR impacts were partially delineated. However, the EC impact has been fully delineated. Note that the excavation polygon and original sample points moved slightly between the original figure and the one attached. It was updated due to field observations and communications with Summit staff.

Please see the attached Analytical Data, Table, Figure, and Boring Logs. Summit contends that all Arsenic and pH impacts are naturally occurring. A produced water sample was collected in February 2023. Please see previously submitted analytical data and Operator Knowledge Statement for details.

Grand River Gathering plans to further delineate this spill or collect additional backgrounds in 2024.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
