Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☐ Were background samples collected as part of this site investigation?

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) Volume of liquid waste (barrels)

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Ongoing Active SVE system operation. System is seasonally turned off during the winter months (power is supplied by solar; lack of sunshine and access to site until March).

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Active SVE includes the 1.5 HP regenerative blower. Subsurface influence across the soil impacts is documented. See attached report from HRL with SVE monitoring data.

OPERATOR COMMENT

This supplemental Form 27 is being submitted to provide updated information pertaining to the ongoing remediation occurring at the Utah Gas Corp (UGC) B-12 location. This remediation has been ongoing since 2015.

Previous update from Q1 2023 noted the site was inaccessible all winter due to a heavy snow year.

In June 2023, a site visit was conducted and the SVE system was found off, probably owing to lack of sunlight from snow covering the solar panels. After some maintenance was performed the system was brought back online. System airflow, radius of influence, air temperature, and effluent PID readings were all taken, as well as an air sample for BTEX. Details regarding instrumentation used and data and results are discussed in the attached report.

SVE System monitoring and reporting will continue to take place quarterly throughout summer and fall of 2023, until site access becomes restricted due to weather.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
