## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### **Other Potential Receptors within 1/4 mile**

Surface water is present in the area in the form of ephemeral streams and small reservoirs. The closest surface water feature to the site is an unnamed ephemeral drainage to the Smoky Hill River. The Smoky Hill River is an ephemeral drainage to Cedar Bluff Reservoir, which is a perennial water body. The unnamed drainage feature is approximately 635 feet to the east of the well site and the Smoky Hill River is approximately 2,109 feet to the north of the well site. The closest perennial water body is Cedar Bluff Reservoir which is more than 118 miles downstream of the site. This site is located within the extents of the Colorado Parks and Wildlife (CPW) High Priority Habitat (HPH) designated for Winter Concentration Area and Severe Winter Range for Mule Deer.
