Subject: **Report of Work Completed**
Chevron 12-11D Wellhead and Flowline Abandonment
CECMC Remediation Project: 28632
CECMC Facility ID: 289079
CECMC Location ID: 335837
Garfield County, Colorado

Mr. Rollins,

Entrada Consulting Group, Inc. (Entrada) was contracted by Caerus Oil and Gas, LLC (Caerus) to conduct field screening and soil sampling associated with the abandonment of the Chevron 12-11D wellhead and flowline on the Chevron EL 12 697 pad (Site).

The Chevron 12-11D wellhead is identified in the Colorado Energy and Carbon Management Commission (CECMC) database by Facility ID 289079. The Site is identified in the CECMC database by Location ID 335837. Work is proceeding under CECMC Remediation Project number 28632.

SITE DESCRIPTION AND PATHWAY TO GROUNDWATER

The Site is situated on the Roan Plateau in the Logan Mesa unit of Caerus' Piceance operations area at an elevation of approximately 8,130 feet above mean sea level (ft-amsl). It is located in both the southwest quarter of the northwest quarter and the northwest quarter of the southwest quarter of Section 12, Township 6 south, Range 97 west of the 6th Principal Meridian in Garfield County, Colorado.

According to the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS), soil at the Site is of the Parachute-Irigul-Rhone association, 25-50 percent slopes. The United States Geological Survey (USGS) reports bedrock in the area as the Parachute Creek Member of the Green River Formation, comprised mainly of fine-grained, low permeability marlstone and oil shale.

The nearest surface water feature to the Site is the spring and associated drainage, located 300 feet east of the Site at an elevation of approximately 8,100 ft-amsl (30 feet below the Site).

EXCAVATION FIELD SCREENING AND SOIL SAMPLING

An Entrada representative was on site May 10, 2023, to conduct field screening and collect soil samples from the excavations at each end of the abandoned flowline. Work to excavate, cut, and cap the flowline was completed prior to arrival. All excavations and samples were inspected for evidence of potential environmental impacts (e.g., staining or hydrocarbon odor) and field-screened for volatile organic compounds (VOCs) with a handheld photoionization detector (PID) equipped with a 10.6 eV lamp.

The excavation at the southeast end of the flowline was located on the southwest side of the 12-11D wellhead and measured 3 feet wide by 8 feet long with the base depth at 5 feet below ground surface (ft-bgs). The southwest wall of the excavation was sloped for access.

The highest VOC concentration field screening in this excavation was 856 ppm at the base of the excavation. A sticky, black substance with a very strong hydrocarbon odor was noted in the soil at an approximate depth of 6 ft-bgs. An elevated VOC concentration of 249.5 ppm was observed on the southeast sidewall at a depth of 3 ft-bgs. VOC concentrations on all remaining excavation sidewalls (NE, NW, and SW) were below 10 ppm. One sample was collected from the base of the excavation (20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5).

The excavation at the northwest end of the flowline was located on the northeast side of the separator and measured 5 feet wide by 8 feet long with a depth of 5 ft-bgs. The northeast wall of the excavation was sloped for access.

The highest VOC concentration in this excavation was 2.88 ppm at the base of the excavation. One sample was collected from the base of the excavation (20230510-CHEVRON EL12 697-(FC-FL 12-11D SEP BASE)@5).

On July 20, 2023, an Entrada representative returned to the Site to conduct field screening and collect soil samples from the excavation at the 12-11D wellhead following completion of plug and abandonment operations. The excavation measured 15 feet square with a depth of 6 ft-bgs.

A total of five (5) samples were collected, one from each sidewall at 5 ft-bgs (20230720-CHEVRON EL12 697-(FC WH 12-11D NW)@5, 20230720-CHEVRON EL12 697-(FC WH 12-11D EW)@5, 20230720-CHEVRON EL12 697-(FC WH 12-11D SW)@5, 20230720-CHEVRON EL12 697-(FC WH 12-11D WW)@5) and one from the base of the excavation at 7 ft-bgs (20230720-CHEVRON EL12 697-(FC WH 12-11D BASE)@7). The highest VOC concentration noted in this excavation was 3.8 ppm from west wall.

An Entrada representative returned to the Site on October 10, 2023, after laboratory analytical results showed exceedances for total petroleum hydrocarbons (TPH) and other organic compounds in the west wall sample. A trackhoe operated by Energy Field Services (EFS) was used to excavate a pothole 10 feet southwest of the former west wall sample location. Samples were collected at 5 and 10 ft-bgs, both with negligible VOC concentrations of 0.1 ppm (20231010-EL12697-(FCWH1211DWW)@5, 20231010-EL12697-(FCWH1211DWW)@10).

Excavation boundaries and soil sample locations are shown in **Figure 1**. All soil samples were collected in 9 oz glass jars, sealed, labeled, and placed into an ice-filled cooler for preservation. Samples were submitted to Pace Analytical in Mt. Juliet, TN and analyzed for the following analyte suite:

- Total Petroleum Hydrocarbons – diesel range organics (TPH-DRO [C10-C28]) and Total Petroleum Hydrocarbons – oil range organics (TPH-ORO [C28-C36]) by U.S. Environmental Protection Agency (EPA) Method 8015M
- TPH – gasoline range organics (TPH-GRO [C6-C10]) by EPA Method 8015D/GRO
- Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene by EPA Method 8260B
- Polycyclic aromatic Hydrocarbons (PAHs)(CECMC Table 915-1) by EPA Method 8270C-SIM
- pH by EPA Method 9045D
- Metals (CECMC Table 915-1) by EPA Method 6010B
 - Hexavalent chromium by EPA Method 7199A
 - Hot-water soluble Boron by EPA Method 6010B-NE493, Ch 2
 - Arsenic by EPA Method 6020
- Electrical Conductivity (EC) by EPA Method 9050AMod
- Sodium adsorption ratio (SAR) by USDA Method H60

BACKGROUND SOIL SAMPLING

Three background soil samples were collected from 1 ft-bgs in undisturbed native soil to the west, north, and east of the pad. Background sample locations are shown in **Figure 1**.

The samples were collected in 9 oz glass jars, sealed, labeled, and placed into an ice-filled cooler for preservation. They were submitted to Pace Analytical in Mt. Juliet, TN and analyzed for the following analyte suite:

- pH by EPA Method 9045D
- Electrical Conductivity (EC) by EPA Method 9050AMod
- Sodium adsorption ratio (SAR) by USDA Method H60
- Metals (CECMC Table 915-1) by EPA Method 6010B
 - Hexavalent chromium by EPA Method 7199A
 - Hot-water soluble Boron by EPA Method 6010B-NE493, Ch 2
 - Arsenic by EPA Method 6020

SOIL ANALYTICAL RESULTS

Analytical results for the nine (9) excavation soil samples are presented in **Tables 1 and 2** along with CECMC Table 915-1 Cleanup Concentrations, Protection of Groundwater Soil Screening Level (PGSSL) concentrations, and Soil Suitability for Reclamation (SSR) standards for comparison. Results in exceedance of these standards are summarized below:

- Total Petroleum Hydrocarbons (TPH, total volatile [C6 - C10] and extractable [C10 - C36] hydrocarbons) were reported in exceedance of the Table 915-1 Cleanup Concentration of 500 mg/kg in three (3) samples:
 - 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 2072 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D WW)@5 at 7362.98 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D BASE)@7 1099.58 mg/kg
- Toluene was reported in exceedance of the PGSSL concentration of 0.69 mg/kg in sample 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 20.3 mg/kg.

- 1, 2, 4-Trimethylbenzene was reported in exceedance of the PGSSL concentration of 0.0081 mg/kg in sample 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 1.64 mg/kg.
- 1, 3, 5-Trimethylbenzene was reported in exceedance of the PGSSL concentration of 0.0087 mg/kg in sample 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 2.75 mg/kg and sample 20230720-CHEVRON EL12 697-(FC WH 12-11D SW)@5 at 0.0191 mg/kg.
- Benzo(a)anthracene was reported in exceedance of the PGSSL concentration of 0.011mg/kg in sample 20230720-CHEVRON EL12 697-(FC WH 12-11D BASE)@7 at 0.0128 mg/kg and sample 20230720-CHEVRON EL12 697-(FC WH 12-11D WW)@5 at 0.0121 mg/kg.
- 1-Methylnaphthalene was reported in exceedance of the PGSSL concentration of 0.006 mg/kg in all samples. Six (6) of the nine (9) detections were at concentrations below the laboratory reportable detection limit (RDL) of 0.200 mg/kg. The remaining three (3) samples with measurable exceedances were:
 - 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 0.0416 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D BASE)@7 at 0.0625 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D WW)@5 at 0.0219 mg/kg
- 2-Methylnaphthalene was reported in exceedance of the PGSSL concentration of 0.019 mg/kg in eight (8) samples. Five (5) of the detections were at concentrations below the laboratory RDL of 0.0200 mg/kg. The remaining three (3) samples with measurable exceedances were:
 - 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 0.0891 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D SW)@5 at 0.0349 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D WW)@5 at 0.0367 mg/kg
- Naphthalene was reported in exceedance of the PGSSL concentration of 0.0038 mg/kg in all samples. Seven (7) of the detections were at concentrations below the laboratory RDL of 0.0200 mg/kg. The remaining two (2) samples with measurable exceedances were:
 - 20230510-CHEVRON EL12 697-(FC-FL 12-11D WH BASE)@5 at 0.0338 mg/kg
 - 20230720-CHEVRON EL12 697-(FC WH 12-11D BASE)@7 at 0.0659 mg/kg
- pH was reported above the SSR acceptable range of 6 to 8.3 in sample 20231010-EL12697-(FCWH1211DWW)@5 at 8.56.
- Arsenic was reported in exceedance of the PGSSL concentration of 0.29 mg/kg in all samples, ranging from 4.41 mg/kg to 23.3 mg/kg.
- Barium was reported in exceedance of the PGSSL concentration of 82 mg/kg in all samples, ranging from 246 mg/kg to 433 mg/kg.
- Cadmium was identified in all samples at concentrations below the laboratory RDL of 1.00 mg/kg. The PGSSL concentration for Cadmium is 0.38 mg/kg.
- Hexavalent Chromium was identified in all samples at concentrations below the laboratory RDL of 1.00 mg/kg. The PGSSL concentration for hexavalent chromium is 0.00067 mg/kg.
- Copper was reported in exceedance of the PGSSL concentration of 46 mg/kg in sample 20230720-CHEVRON EL12 697-(FC WH 12-11D EW)@5 at 182 mg/kg.
- Lead was reported in exceedance of the PGSSL concentration of 14 mg/kg in seven (7) samples ranging from 15.8 mg/kg to 23.2 mg/kg.

- Nickel was reported in exceedance of the PGSSL concentration of 26 mg/kg in sample 20231010-EL12697-(FCWH1211DWW)@5 at 34.2 mg/kg and sample 20231010-EL12697-(FCWH1211DWW)@10 at 30.3 mg/kg.
- Selenium was identified in all samples at concentrations below the laboratory RDL of 2.50 mg/kg. The PGSSL concentration for selenium is 0.26 mg/kg.

All remaining soil analytical results were below applicable CECMC Table 915-1 standards. Laboratory analysis reports and chain-of-custody documentation are included as **Attachments**.

CONCLUSIONS AND RECOMMENDATIONS

Soil analytical results have reported detections of cadmium, hexavalent chromium, and selenium in all samples at concentrations below respective laboratory RDLs. Most reported detections of 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were also at concentrations below respective laboratory RDLs. Entrada requests that CECMC Table 915-1 Footnote 9 be considered for all results below laboratory RDLs.

The base of the flowline excavation adjacent to the separator had reportable concentrations of arsenic, barium, and lead in exceedance of respective PGSSL concentrations. The concentrations of arsenic and barium in this sample were below the site-specific background concentrations.

The north wall of the wellhead excavation had reportable exceedances for arsenic and barium; however, these were below the site-specific background concentrations.

The east wall of the wellhead excavation had reportable concentrations of arsenic, barium, copper, and lead in exceedance of the respective PGSSL concentrations. The concentrations of arsenic and barium were below the site-specific background concentration.

The south wall of the wellhead excavation had reportable concentrations of 1, 3, 5-trimethylbenzene, 2-methlybenzene, arsenic, barium, and lead. The concentrations of arsenic and barium were below the site-specific background concentrations.

TPH and remaining organic compounds were not present in samples collected from the west wall of the wellhead excavation. The pH results of the sample at 5 ft-bgs was slightly above the SSR upper limit, but the sample at 10 ft-bgs was within the SSR range. Both samples had elevated concentrations of arsenic, barium, lead, and nickel in exceedance of respective PGSSL concentrations.

The base of the wellhead excavation at 7 ft-bgs had exceedances in TPH, benzo(a)anthracene, 1-methylnaphthalene, naphthalene, arsenic, barium, and lead. The concentrations of arsenic and barium were below the site-specific background concentrations.

Entrada requests that the CECMC consider Table 915-1 Footnote 1 in the case of all above-mentioned exceedances that fall below site-specific background concentrations.

Based on the analytical results discussed above, Entrada recommends the following:

- Collection of a representative produced water sample from another well at the Site completed in the same formation as the 12-11D to be analyzed for CECMC Table 915-1 Metals to determine whether those constituents are present in the produced water at concentrations that could cause the elevated levels observed in the soil samples.

- Additional excavation at the 12-11D wellhead to remove soil with organic exceedances.

We appreciate the opportunity to assist Caerus Oil and Gas LLC. Please contact us at (970) 270-2986 if you have any questions.

Sincerely,

ENTRADA CONSULTING GROUP

Notes:

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimeter

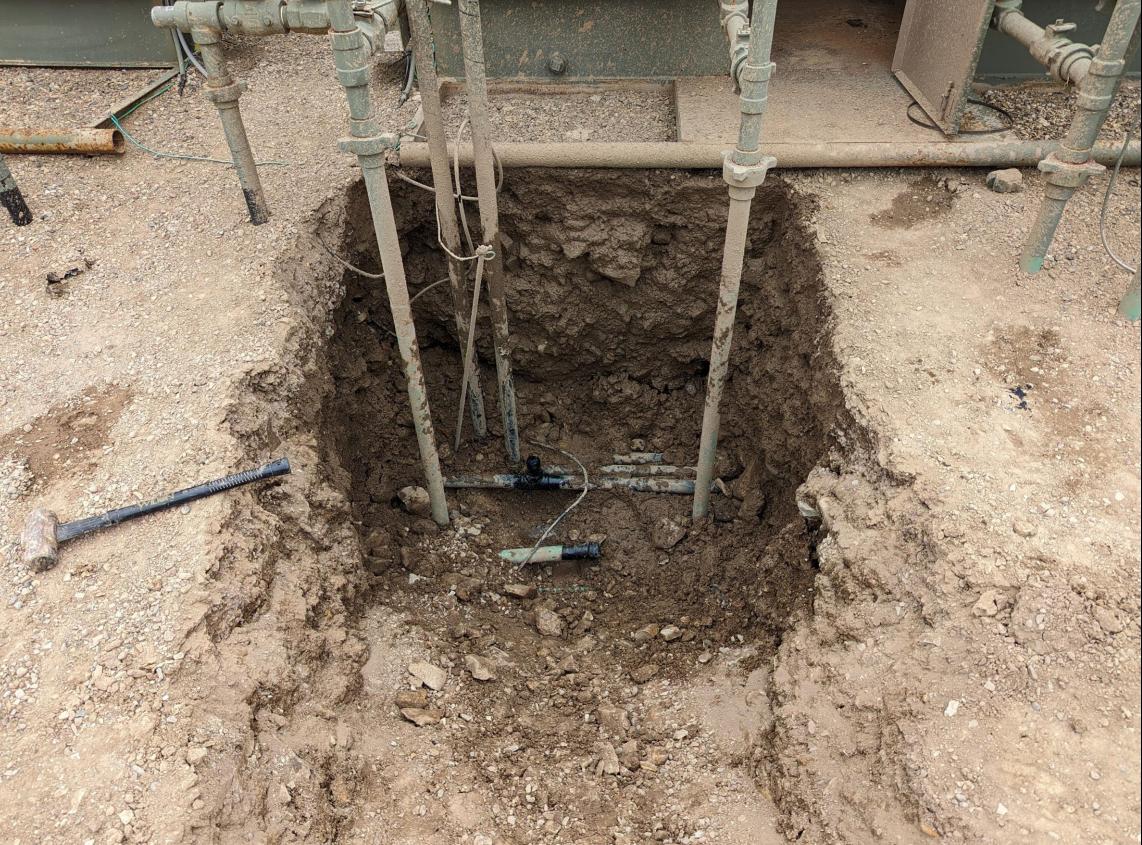

mg/L - milligrams per liter

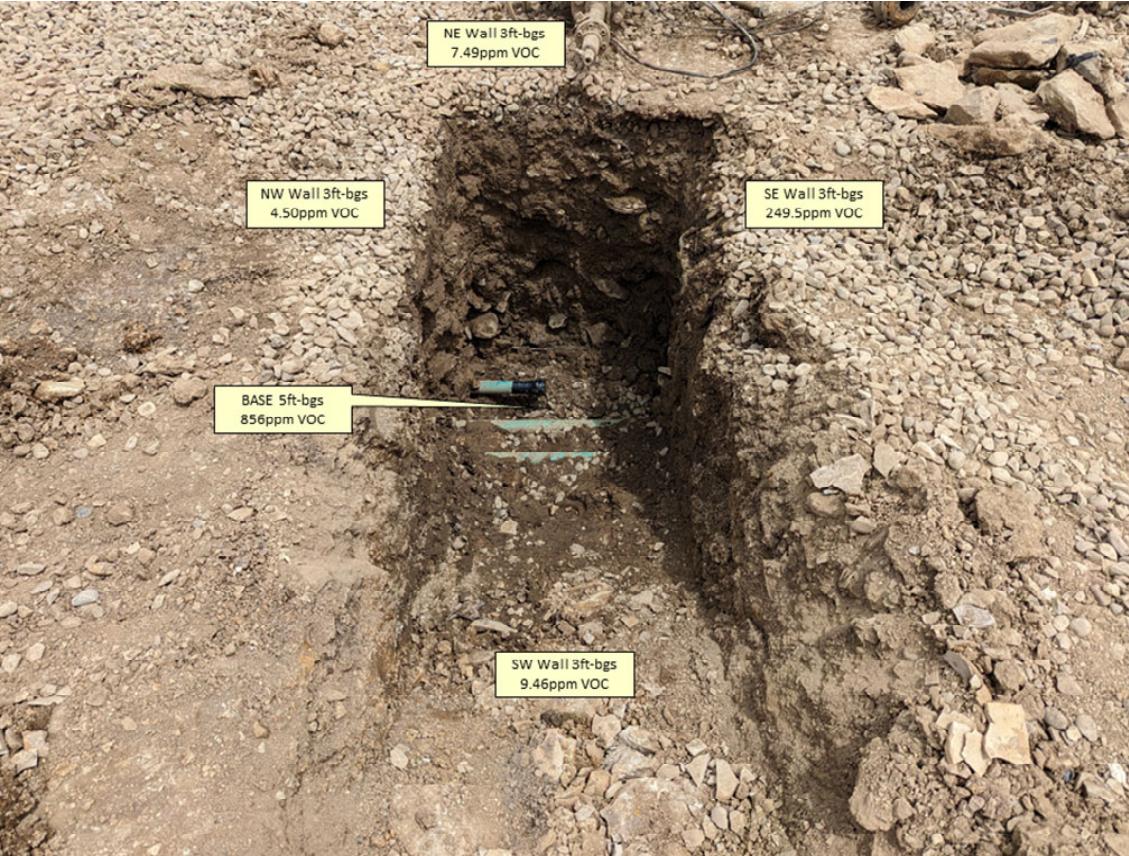

TPH - total petroleum hydrocarbons

< - indicates result is below the laboratory minimum reporting limit

BLUE - indicates result is above the applicable Table 915-1 Protection of Groundwater Screening Level

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier

Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
T8	Sample(s) received past/too close to holding time expiration.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gl
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
RDL	Reported Detection Limit.	² Tc
Rec.	Recovery.	³ Ss
RPD	Relative Percent Difference.	⁴ Cn
SDG	Sample Delivery Group.	⁵ Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁶ Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	⁷ Gl
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁸ Al
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	⁹ Sc
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
T8	Sample(s) received past/too close to holding time expiration.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Sample Narrative:

OS: Surrogate failure due to matrix interference

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
RDL	Reported Detection Limit.	2 Tc
Rec.	Recovery.	3 Ss
RPD	Relative Percent Difference.	4 Cn
SDG	Sample Delivery Group.	5 Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	6 Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	7 GI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	8 Al
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	9 Sc
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier Description

E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
