COMMENTS:

Vision Energy

Justification for Bradenhead Test to be used as an alternative to an actual MIT

2023

Well Name: Cameo Federal C-1 API:05-077-05061

1. Explanation as to why a Form 21 MIT cannot be completed:

The number of wells to be tested and lack of available rigs to perform those tests (and company manpower limitations) precludes them from getting completed prior to the end of the year.

2. Qualitative evidence of Bradenhead test, casing, tubing and annular pressures. See attached Bradenhead Form 17 that was submitted.

3. An explanation, given the qualitative information provided, that the well in its current state demonstrates mechanical integrity. There is no indication of communication between the casing/tubing and the bradenhead as the bradenhead pressure was zero despite high casing and tubing pressures and no changes were observed during the bradenhead test in the casing/tubing pressure (s).

Cement Log: Could not be located

4. Current WBD: Submitted as attachment

5. Information on how the well will be monitored for any changes that would indicate a mechanical integrity failure.

Regular monitoring of casing/tubing pressures and the impact of those pressures on the bradenhead will be used to determine if a mechanical failure occurred.

6. Explicit statement along the lines of: Bradenhead test performed on 11/30/2023 demonstrates this well has mechanical integrity and protects health, safety, welfare of the environment and wildlife resources.

7. Future plan for the well. If possible, the well will be returned to production from the existing completed interval. If not possible, the well may be recompleted to an uphole productive interval.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Total volume of gas vented or flared: _____ mcf ☐ estimated ☐ measured
