## Report of Work Completed – Wellhead Pre-P&A Investigation

<b>ECMC Location Name (ID)</b>	NPR/G09 Pad (335699)
<b>ECMC Wellhead Name</b>	N. PARACHUTE CP14A-09 G09 59
<b>Operator Wellhead Name</b>	G09-596 14A-09
<b>API #</b>	05-045-13007
<b>ECMC Remediation Project Number</b>	28648
<b>Legal Description</b>	SWNE Sec. 9 T5S-R96W
<b>Coordinates (Lat/Long)</b>	39.632252 / -108.173752
<b>County</b>	Garfield County, Colorado

Mr. Janicek,

Confluence Compliance Companies, LLC (Confluence) prepared this Report of Work Completed (ROWC) for Caerus Oil & Gas LLC (Caerus) to document site investigation activities associated with plugging and abandonment (P&A) of the N. PARACHUTE CP14A-09 G09 59 (API# 05-045-13007) wellhead at the G09-596 well pad (Location). The Location is 13.7 miles northwest of Parachute, Colorado, in Garfield County as illustrated in the attached Topographic Location Map. Additional information on the Location and the associated investigation is provided in the title block above, the attached Site Diagram, and laboratory analytical report. This ROWC provides background on the Location, methods used to complete the site investigation, results of the investigation, and recommendations for how to proceed with this information.

### Background

On March 9, 2023, to comply with Energy & Carbon Management Commission (ECMC) Rule 913.c.(9),, Caerus submitted initial Form 27 Document 403342279 to open Remediation Project Number 28648 and propose site investigation activities. There are three additional wellheads at the Location planned for P&A which are being reported under separate Remediation Project Numbers.

### Methodology

On July 20, 2023, a pre-P&A investigation was completed at the Location to document soil conditions prior to cut and cap operations. Using a hydro-vacuum truck, one soil boring was advanced to a depth of 10 feet below ground surface (bgs). One soil sample was collected at the terminus of the soil boring. The soil sample was characterized using visual and olfactory observations and field-screened using a photoionization detector (PID).

The sample was placed in laboratory provided containers, immediately placed on ice, shipped to Pace Analytical under completed chain of custody, and analyzed for ECMC Table 915-1 soil constituents of concern. The sample location is illustrated in the attached Site Diagram.

## Results

These results summarize observations from onsite investigation efforts and associated laboratory analytical results. For organizational and presentation purposes, the results summary is divided between general observations of lithology and hydrogeology for the entire Location and site investigation activities.

Collected spatial data are depicted in the attached Site Diagrams. Laboratory analytical report are attached and summarized in the Laboratory Results Summary Table.

### Lithology and Hydrogeology

Lithology at the Location is characterized as sandy clay with gravel. Groundwater is expected to flow north to West Fork Parachute Creek and ultimately to the Colorado River, located 14.7 miles south of the Location. The Location sits approximately 120 feet higher in elevation than West Fork Parachute Creek, located 0.12 miles north of the Location. Based on the elevation difference, depth to water at the Location is estimated to be greater than 100 feet. No groundwater was observed during sampling activities.

### Pre-P&A Investigation Results

Field screening results of the initial P&A characterization sample indicated no hydrocarbon odor or staining with a PID measurement of 0.6 parts per million (ppm). Analytical results of the sample indicate compliance with ECMC Table 915-1 Residential Soil Screening Levels (RSSLs) except for arsenic and hexavalent chromium. Arsenic exceeds at 10.1 milligrams per kilogram (mg/kg) and hexavalent chromium exceeds at 1.94 mg/kg.

### Analysis and Recommendations

Based on the estimated depth to groundwater of greater than 100 feet bgs, Confluence recommends that Caerus request to compare analytical results for this remediation project to ECMC Table 915-1 RSSLs as no reasonable pathway to groundwater appears to exist.

Assuming the proposed request for comparison to ECMC Table 915-1 RSSLs is approved, levels of arsenic and hexavalent chromium exceeding ECMC Table 915-1 RSSLs are present in the investigation area. Confluence recommends collecting one confirmation soil sample adjacent to the capped well following the completion of P&A activities to determine whether soil impacts are present. Confluence recommends submitting the sample for laboratory analysis of all ECMC Table 915-1 soil constituents to confirm. Additionally, Confluence recommends the collection of background soil samples to establish native levels of inorganic constituents at the Location.

Confluence is grateful for the opportunity to support you with this project. If you have any questions about the methods, results, or recommendations presented here, please do not hesitate to contact us.

Regards,

*Steve Sivigliano*

### Legend

 Soil Sample

Spatial data was collected using a handheld GPS unit with submeter accuracy. Illustration discrepancies may be present in this diagram due to the inherent limitations of data accuracy for both project data and the underlying aerial imagery. The position of illustrated data may have been manually adjusted to align with the aerial imagery in a manner more representative of field conditions for presentation purposes only.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
RDL	Reported Detection Limit.	<sup>2</sup> Tc
Rec.	Recovery.	<sup>3</sup> Ss
RPD	Relative Percent Difference.	<sup>4</sup> Cn
SDG	Sample Delivery Group.	<sup>5</sup> Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>6</sup> Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>7</sup> GI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>8</sup> AI
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	<sup>9</sup> SC
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

### Qualifier      Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
T8	Sample(s) received past/too close to holding time expiration.
