Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A compromised line resulted in approximately 1.5 bbls of fluid to be released to the ground surface and an unknown volume to the subsurface. Operations were immediately halted, and a vac truck was dispatched to remove the standing surficial fluids, which were limited to the pad surface. The line is scheduled to be exposed and repaired and will be pressure tested prior to returning to service. The impacted soil will be removed and hauled for disposal. Confirmation soil samples will be collected in compliance with ECMC Table 915-1.
