Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

PDC discovered a reportable spill at the Guttersen 31T-221, 40.174874, -104.472516 at the tanks. The source of the spill has been controlled and was inside containment. The volume of the spill was less than 1 bbl inside containment but high winds caused misting to travel off-site. Spill clean-up and delineation activities are underway.
