COMMENTS:

On 10/19/2023 a pre-frac form 17 was performed and starting pressure at this time was 268 and blew down to 0 psi. A gas sample was collected, and results show high hydrogen concentration and low relative methane concentration relative to what is typically seen in the Niobrara gas.
Due to the current pressure on the surface casing, we would like to add this well to our surface kit program. The expectation is that we have a finite volume of gas and as we bleed off pressure through our abatement process the pressure will continue to decrease. We will use this mitigation strategy to relieve pressure and further diagnose the source of the pressure. The process will be as follows- abate for a period, build up for 7 days, check pressure, blow down and repeat.

CONDITIONS OF APPROVAL, IF ANY:

<u>COA Type</u>	<u>Description</u>
1 COA	1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare. 2. Prior to starting bradenhead abatement, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the ECMC within three months of collecting the samples. 3. Bradenhead gas is not to be vented to atmosphere; any gas from the Bradenhead will be routed to an enclosed tank and/or combustor. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. The abatement program may be used for six consecutive months. 4. Operator will submit a Form 42 ("OTHER") stating that "bradenhead abatement program has started." 5. By 4/19/24, conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, flow rate information, pressure data and a discussion of the sample analysis. Shut in bradenhead pressure shall not exceed 50 psig.
