SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Once soil samples are conducted, we will determine if source material is necessary for removal. If it is necessary, natural attenuation will be the most likely removal method for source material. Affected soils will be identified, removed, and disposed of at the Trinidad Landfill.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Once soil samples are conducted, we will determine if source material is necessary for removal. If it is necessary, natural attenuation will be the most likely removal method for source material. Affected soils were identified, removed, and disposed of at the Trinidad Landfill.
