17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Date of work 9-23-80

This well had been producing from the "D" Sand (4852-55') since January, 1960. Casing problems developed in this well from about 650-1950'. On 3-27-80, a service unit was moved to location. 3/4" rods were found to be parted at 3350', with the 2" tubing full of drilling mud. On 4-3-80 a 4-1/2" Baker mechanical set Model "N" cast iron BP was run on the 2" tubing, hydrotested to 6000# while going into the hole. The BP was set at 4729' (above the "D" Sand). The 2" tubing was pulled and laid down. A dump bailer was run with 1 sx of cement (approximately 10') dumped on top of the BP. The well was T.A.'d on 4-4-80.

On 9-22-80, the following work was performed: 1. Pushed Halliburton 4-1/2" plug down the 4-1/2" casing to 160'. Dumped 3 gallons cement on top of plug. Let set overnight. On 9-23-80, the 4-1/2" casing was filled from 160' to surface with 17 sxs common cement. WELL IS P.A.'d (9-23-80)
