

September 30, 1959

MEMO

TO: Frank Piro

FROM: W. R. Smith

Reference is made to a recent phone conversation you had with Plains Exploration regarding gas-oil ratio of their #2 Mitchell well in Sec. 28, T-2N, R-54W, Ruby Field, Washington County, Colorado.

In compliance with your request, a gas-oil ratio test was run on September 20, 1959, for both the #1 and #2 wells. 278 Mcf. of gas were measured through a 2-3/4" orifice, while 119 barrels of oil were being produced, for a ratio of 2336 cubic feet per barrel.

I was further informed that Plains has signed contracts with Kansas-Nebraska, and a gas market should be available for the field in 45 to 60 days.
