Yes, they need to be finished by March 1st and you will need to pay crop damages for the hay that is currently planted there.

THanks

Joe

Thanks for the phone call this morning Joe,

To follow up on locating the Yamaguchi R Clarke P27-9 with the magnetometer, they would like to complete that next week. Do you approve us locating this well and then re-entering the well to plug it?

I do not have a date for when the rig is estimated to be there, but I told them it needed to be completed this winter. Please let me know if you have any other questions.

Cheers,

Emma

Hello Joe,

I wanted to reach out and ask about your crop timing for the larger pivot in the field off of CR 21. I know you usually have an array of produce. We have two wells on our workover rig schedule which are shown in the attached PDF.

We would like to schedule to plug and abandon the Yamaguchi 33-37. This is a producing well operated by Kerr-McGee. Is there a time frame that avoids crops and maintenance?

We need your permission to locate the Yamaguchi R Clarke P27-9. This well was operated and plugged by Noble, but it doesn't meet the requirements for new wells to be drilled in its proximity. We would like to work with you to locate the well using a magnetometer. Once the well is located, we will dig to expose the well casing and re-enter the well to plug it more efficiently. We would also work to avoid your crop timing for the re-entry work.

Please reach out if you have any questions or comments.

Cheers,

*Emma F Vannoy*
