Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A compromised fire tube on the Trott 8E-10-9N separator resulted in approximately 8 bbls of fluid to spill to the ground surface. The spill was contained entirely on pad and a vac truck was dispatched to remove the standing fluids. The impacted soil will be removed and hauled for disposal and confirmation soil samples will be collected in compliance with ECMC Table 915-1. In addition, a waste characterization sample was collected and submitted for full Table 915 analysis. Analytical results will be provided on a supplemental Form 19.
