Subject: Wellington Operating Company, TA Well W F Muddy UT/Fleming 13-1 Form 17,
Bradenhead Test Report

Dear Mr. Jacobson;

Wellington Operating Company (WOC) is responding to your email dated December 22, 2023 concerning a missing Form 17, Bradenhead Test Report, for TA Well W F Muddy UT/Fleming 13-1 (Well 13-1).

King Operating Company (KOC) currently located in Addison, Texas purchased the WOC from the previous owner on March 21, 2021. After the purchase KOC through WOC began addressing various regulatory issues the previous owner had not addressed. This included the fact that a number of wells did not have surface valves for performing Bradenhead monitoring. This issue was addressed by previous consultants for KOC and WOC with the Colorado Oil & Gas Conservation Commission (COGCC).

WOC began installing the Bradenhead Surface valves so that the Bradenhead monitoring could be conducted. Well 13-1 is the last well required to have a Bradenhead surface valve installed. Additionally, Well 13-1 as been listed Form 6A and WOC is planning on permanently abandoning (PA) this well within the required time frame allowed by this form. WOC has worked to PA four wells to date with two additional wells to be PA'ed by April 2024.

WOC has coordinated with the surface owner, Larry Wagner, concerning the work required to install the surface valve and he has requested the work be performed during the winter months due to summer crops in the vicinity of the well, the use of the land in the fall being to pasture cattle there for as long as reasonable, and springs in the area that flow during some months of the year resulting in soft surface conditions.

It is WOC's intention to install the Bradenhead surface valve during the winter months of 2024, have the work completed and reported by April 30, 2024. The actual dates to preform the work are not scheduled yet due to crew availability, unknown weather conditions, the

actual surface conditions to reduce damages to the soil surface and existing hay crops that return in the spring.

If for unknown or anticipated reasons the Bradenhead surface valve is unable to be installed by April 30, 2024; this work would then be delayed until next year. WOC intends to do everything in its power to get this work completed before the April 30, 2024, that we have proposed here in this letter.

Sincerely;

A handwritten signature in black ink that reads "Randy Evans". The signature is written in a cursive, slightly slanted style.
