## COMMENTS:

After a Form 17 Bradenhead Test (Doc # 403631621) the Federal 01-42 (API # 05-045-07185) has been identified as have no flow on the BH after the 30-minute blowdown test. The test shows an initial BH pressure of 186 psi with 0 psi at the expiration of the 30-minute blow down. Due to the BH pressure being greater than the max allowable (~172 psi or 30% of casing shoe depth), Caerus Oil and Gas has determined the best path forward is to tie-in the surface casing to the sales line to allow the bradenhead pressure to continuously blow-down/equalize with sales line pressure. Sales pressure is currently residing ~155 psi (see attachment). Note: Pressures on the production casing string during the bradenhead blow-down test confirm casing integrity is not compromised
