## COMMENTS:

The work in the proposed 2022 Pressure Management Plan for this well has been completed (Doc ID 403217973). During the blowdowns, the well blew down to a variety of conditions including no flow, whisper, and continuous (with at most 10 psi at the conclusion of the test) with initial pressures ranging from 117 psi to 152 psi. Based on the variety of conditions experienced during the blowdowns and the 2023 annual test (Doc ID 403538446), Caerus has submitted a new BH mitigation plan (Doc ID 403555027) to continuously monitor pressures with a transducer tied to Cygnet. This plan has been approved and Caerus is currently in the process of implementing.
