COMMENTS:

The most recent Form 4 for abatement for this well was submitted on 12/18/2023 doc# 403627326. However, after a successful trial mitigating surface casing pressure on the Guttersen C28 wells, Chevron proposes attempting a pre-frac mitigation using the Local Expansion Tool from Renegade in an attempt to shut off bradenhead pressure to below 50 psi and ultimately move forward with completions.

The local expander tool uses a controlled mechanical expansion to dent the casing, densify the cement behind casing and seal off microannul. Diagnostic logs indicate that this well is a good candidate for this technology. Our SMEs have evaluated the technology and are confident that the expansion ratio of the tool- controlled within certain specifications- will not exceed to max elongation of our casing.

Chevron proposes making multiple sets of indentions between 6750' (50' above the NIO) and 1,971' (50' below the SC shoe). Selected depths will be based on log data and subsequent build-ups. Surface casing is set at 1921'. If we still have surface casing pressure remaining after the operation, we plan to re-install a surface kit and monitor pressure build-ups periodically.

CONDITIONS OF APPROVAL, IF ANY:**COA Type****Description**

	No casing indentations shall be made shallower than 1971'.
	<p>1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.</p> <p>2. Prior to starting bradenhead mitigation, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the ECMC within three months of collecting the samples.</p> <p>3. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. During the shut-in period record pressure data to adequately characterize the build-up. This mitigation plan may be used for six consecutive months from the date test reported on the Form 17.</p> <p>4. By 4/19/24, conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition.
