COMMENTS:

During the Form 17 performed on 7/28/2023 we obtained a bradenhead gas sample. The sample had 96.7% nitrogen and 0.7% methane. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. We also obtained a production gas sample on 7/28/2023. A bradenhead oil sample was also collected on 7/28/2023. Sample analysis showed hydrocarbons predominantly in the diesel organic range (C10-C28), matching the free oil phase from oil-based mud. The liquid hydrocarbon sample does not match concentrations found in the Niobrara organic range. Some residuals from oil-based mud are expected. This well was added to our mitigation program on 8/21/2023. Chevron performed a fluid pull on 9/7/2023 that had a starting surface casing pressure of 168 psi and when the bradenhead was opened 6 gallons in 1 minute flowed for a calculated initial flow rate of 6.0 gallons/minute. During the fluid pull we collected 175 gallons of fluid from the bradenhead. On 1/25/2024 a Form 17 was completed with a starting pressure of 1 and an ending pressure of 0 psi. This well is in compliance with Order 1-232, and we request the well be returned to annual testing.
