**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

As part of the ECMC's ongoing investigation into production well API #05-123-16238, the ECMC has requested that Kerr-McGee Oil and Gas Onshore LP (KMOG) investigate the Johnson 7-30A well (API #05-123-20767). The Johnson 7-30A was plugged and abandoned in October of 2019. KMOG's investigation report is attached.

**PROPOSED SAMPLING PLAN****Proposed Soil Sampling**

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

In the Form 27 Initial (Document #403639995), at the request of the ECMC, KMOG proposed to conduct a soil vapor survey in the vicinity of the P&A'd Johnson 7-30A well. KMOG's investigation into the Johnson 7-30A well, (see attached Johnson 7-30A Investigation: Gas Composition and Related Data Analysis report) establishes that the Johnson 7-30A well is not responsible for potential stray gas in the area. In light of this, KMOG requests closure of this remediation project with no additional work to be completed, including the proposed soil vapor survey.

**Proposed Groundwater Sampling**

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Proposed Surface Water Sampling**

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## **SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

KMOG has completed their investigation into the Johnson 7-30A well. Please see the attached "Johnson 7-30A Investigation: Gas Composition and Related Data Analysis" report by Dr. Anthony Gorody.

## **REMEDICATION SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

KMOG has completed their investigation into the Johnson 7-30A well. Please see the attached "Johnson 7-30A Investigation: Gas Composition and Related Data Analysis" report by Dr. Anthony Gorody. The report demonstrates that gas samples from the bradenheads of both KMOG's Johnson 7-30A well and K.P. Kauffman Company, Inc's Johnson 32-30 well are analytically indistinguishable from one another and that they could not have been derived from underlying production gas intervals completed in commingled Niobrara, Codell, and J sand production zones. The conclusion is based on 34 gas sample data records for samples collected in all the neighboring commercial gas wells within a ¼ mile radius of the Johnson 32-30 well. On the basis of other published data, Dr. Gorody's report further demonstrates that gas composition in bradenhead gas samples from both wells is fully consistent with a Sussex Formation source. In light of the findings of this investigation, KMOG is requesting closure of this remediation project.
