## COMMENTS:

Due to an observed increase in pressure during a monthly pressure check (max 203 psi). Chevron put the well on a surface kit per Form 4 Sundry approved on 12/21/23, and then a request to attempt a pre-frac mitigation using the LET tool from Renegade and was approved on 1/25/24. Pressures and crimp sequence of depths are as follows:

Baseline 30 min build-up: 10.5 psi

Sequence 0: 6280' (Tool failure issues after first indentation)

Sequence 1: 6279', 6278', 6277'

30 min build up: <1 psi

Shut-in for 10 days (tool issues)- Built up to 41 psi.

Sequence 2: 5906', 5905', 5904'

30 min build up: 2 psi

Sequence 3: 4881', 4880', 4879'

30 min build up: 1 psi

Sequence 4: 4041, 4040, 4039'

Sequence 5: 2767', 2766', 2765'

Post casing expansion:

The well was shut-in for a full 7-day build-up shortly after sequences were completed in order to gauge the efficacy of the surface kit blowdowns and casing expansions.

2/15/2024- Form 17 conducted after 7 day build up- initial surface casing pressure 47 psi (Form 17 submitted 2/20/2024)

We propose moving forward with frac on this well. Pre-frac, we will continue to monitor blowdown and build up pressure periodically utilizing the surface kit. We commit to staying below 200 psi during frac and shutting down to investigate and reach out to the state if this threshold is exceeded. We will be keeping the PRV installed with a pop-off value just above 200 psi to ensure we don't inadvertently pressure up the annulus if we encounter an unexpected pressure spike. If we see evidence of communication up the surface casing annuli, we will shut down and not resume until ECMC has approved a new plan forward.
