**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation was conducted pursuant to COGCC Rule 911 at the UPRC CHEWY T5N-R64W-S23 L01 Tank Battery location.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s). Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

**Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater was not encountered during the site investigation.

**Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection at the tank battery area occurred during abandonment activities. Field personnel field screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. The COGCC Tank Battery and Produced Water Vessel Closure Checklists were utilized and filled out during the abandonment process. A photolog is attached.

Five background samples will be collected from similar depths and lithologies to characterize native soil and be used to attribute pH concentrations outside the Table 915-1 standard range to native soil conditions.  
pH concentrations outside the Table 915-1 standard range were observed in multiple locations, adjacent to the wellhead, at sample location 'FL01@2.0'. The soil will be resampled and analyzed for pH in the same locations and depths where the initial elevated pH concentrations were observed. Noble will request an NFA be granted if the reanalyzed sample is within the Table 915-1 concentration range.  
Alternatively, if the sample's result is outside the Table 915-1 pH concentration range and cannot be attributed to native soil conditions via background soil characterization a minimum of five additional samples with be collected to delineate the magnitude and extent of elevated pH. Following completion of the pH delineation Noble will submit a detailed reclamation plan and will request NFA designation be granted under Rule 915.b: Request to leave elevated inorganics in situ.
