(No Well Provided)

COMMENTS:

Due to high bradenhead pressure, Chevron put the well on a surface kit per Form 4 Sundry approved on 9/6/2023, and then a request to attempt a pre-frac mitigation using the LET tool from Renegade was approved on 12/11/2023.

Baseline 30 min build-up: 126 psi

Sequence 1: 4,647'-4,644'

30 min build up: 4 psi

Sequence 2: 4,411'-4,408'

30 min build up: 11 psi (changed to digital gauge)

Sequence 3: 3,771'-3,769'

30 min build up: 4 psi

Sequence 4: 3,677'-3,675'

30 min build up: 7 psi

Sequence 5: 2,891'-2,889'

30 min build up: 5 psi

Sequence 6: 2709'-2,707'

30 min build up: 5 psi.

Post casing expansion:

The well was shut-in for a full 7-day build-up shortly after sequences were completed in order to gauge the efficacy of the surface kit blowdowns and casing expansions.

Form 17 conducted after >7 day build up- initial surface casing pressure 16 psi (Form 17 conducted 2/26/2024)

We propose moving forward with frac on this well. We commit to staying below 200 psi during frac and shutting down to investigate and reach out to the state if this threshold is exceeded. We will be keeping the PRV installed with a pop-off value just above 200 psi to ensure we don't inadvertently pressure up the annulus if we encounter an unexpected pressure spike. If we see evidence of communication up the surface casing annuli, we will shut down and not resume until ECMC has approved a new plan forward.
