COMMENTS:

On March 2nd 2024 at 7 am pressure increased to >200 psi. The maximum observed pressure was 325 psi. . As they slowed their rate the pressure dropped and when they shut down pressure dropped to 150 psi. They bled the well to zero and saw a negligible (<1 cup) amount of fluid and no sustained flow. We are going to open the well to a tank. This well does not have a history of high BH pressure prior to frac, the last two monthly monitoring points were 31 psi and 30 psi (Jan and Feb respectively). Since opening the well to a tank and after the initial bleed off, we have seen no communication or pressure build up on this well. The well was shut in 3/12/2024 and remained at 0 psi for four hours (at time of this report). The Broe frac is scheduled to end on March 26th, after which we will continue to monitor pressure per normal monitoring protocol.
