Yes	SOILS	TBD	Laboratory analytical results

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

The Marick Location, and associated Marick A-1 Pits (North and South) and Tank Battery were decommissioned in accordance with ECOM Rule 911.a. and ECOM Rule 913.c.(1). Initial sampling was conducted on 3/4/2024. 17 total samples (including 2 background) were collected and submitted to Elevation Diagnostics for laboratory analysis. Visual inspection and field screening of soils beneath the Tanks and the N&S Marick A-1 Pit Walls were done during sampling activities. Floor samples from the N&S Pits were not taken on 3/4/2024 due to water within the Pits. Analytical results for the Pit Walls exceeded ECOM Table 915-1 for SAR, pH, Boron, and EC. All soil samples, including the background samples, exceeded ECOM Table 915-1 levels for Arsenic. The soil samples from beneath the Tanks and Pit Walls were within the Local Clean-Up Level (1.25 x 5.18 = 6.48 mg/kg). Further assessment for Full Table 915-1 analysis will be conducted at the N&S Pits.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Additional soil sampling within the north and south pits will be conducted. In the absence of apparent impacts, soil samples will be submitted to an accredited laboratory for analysis for benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, total petroleum hydrocarbons (TPH) - gasoline range organics (GRO:C6-C10) by USEPA Method 8260D, TPH - diesel range organics (DRO:C10-C28) and oil range organics (ORO: C28-C40) by USEPA Method 8015D, pH, specific conductance (EC), sodium adsorption ratio (SAR) by saturated paste method, and boron by hot water soluble soil extract method.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If groundwater is encountered during facility decommissioning activities, a minimum of one grab sample will be collected as soon as practical. Groundwater samples will be submitted to an accredited laboratory for analysis of BTEX, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene, using standard methods appropriate for detecting the target analytes in ECOM Table 915-1.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Two (2) background soil samples were taken at eighteen inches (18") bgs. Soil samples were submitted to Elevation Diagnostics for analysis of Boron, EC, pH, SAR, and Table 915-1 Metals.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____ Volume of liquid waste (barrels) _____

☒ Is further site investigation required?

Operator still had water within the N&S pits at time of sampling. Samples from the N&S pit floors will be collected and submitted for laboratory analysis when the water has evaporated. The Pit sidewall sample had elevated results, so further assessment will be conducted.
