API	Well Name

COMMENTS:

This well had bradenhead mitigation executed with the Renegade Local Expander Tool. The pressure was sufficiently mitigated but during pre-frac pressure testing it was determined that casing integrity was lost in the vertical. What follows is a proposed procedure for mitigating casing integrity issues using an expandable liner.

Borys C22-755
API 05-123-48907
Indention Length 3512
CIBP + 2sks 6555'
Indention Sequences 6277, 5904, 4879, 4039, 2765

- 1) Move in workover rig, pump and tank.
- 2) Test BOPs
- 3) Run full drift string mill and casing scraper (two trips).
- 4) Pressure test casing above planned liner top to 9000 psi for 30 min.
- 5) Pressure test against CIBP below planned liner bottom with a test packer.
- 6) RIH w/ expandable liner.
 - a. Total length will be ~150' + indention interval + ~4% length to account for casing shortening as it expands.
 - b. Liner is to cover all indention sequences
 - c. Final tally to be provided by Enventure.
- 7) Set liner per Enventure SOP.
 - a. Liner will cover entire indention interval plus additional footage to guarantee indention coverage post expansion.
- 8) POOH w/ setting assembly.
- 9) RIH w/ drill out BHA (undersized 4" flat bottom mill and motor).
- 10) Drill out shoe of patch per Enventure SOP.
- 11) POOH w/ drill out BHA.
- 12) Load well, test casing to 9,000 psi for 30 minutes to verify patch is holding.
 - a. Pressure test must be charted.
- 13) RIH and drill out CIBP + 2 sks at depth in table above.
- 14) Push junk to toe of well.
- 15) Toe prep for frac.
- 16) RDMO workover rig.
