INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation w conducted pursuant to COGCC Rule 911 at the UPRC T4N-R66W-S27 L01 Tank Battery location.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Eight grab confirmation soil samples were collected from the produced water vessel excavation, beneath the ground oil tank, and at the separator. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was encountered during site assessment activities and the soil bore locations were completed with monitoring wells. Groundwater was collected for analysis of BTEX, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, naphthalene, and inorganic parameters.

Proposed Surface Water Sampling

REMEDIAL ACTION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Excavation to remove impacted soil. Groundwater monitoring wells were reinstalled as necessary to determine appropriate remedial approach for groundwater. Time to achieve NFA is estimated to be in Q1 2024. Three consecutive clean quarters of groundwater have been achieved at the site under static conditions. Three monitoring wells were destroyed (MW-2R, MW-3R, MW-5R) prior to the Q3 2023 monitoring event. These wells be replaced prior to the next monitoring event.
