INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On February 18, 2022, the plug on a blind flange was found to be missing, releasing produced water into the valve can. The release was stopped, and the missing plug was replaced. Standing fluids were recovered using a vacuum truck. The release was reported in Energy & Carbon Management Commission (ECMC) Form 19 Document 402960724 to open Spill/Release Point ID 481663. ECMC Form 27 Document 403074715 was later submitted to open Remediation Project 23864. See the Report of Work Completed (ROWC) associated with Document 403260849 for site investigation details.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Background soil samples will be collected from comparable, nearby non-impacted native soil to establish native concentrations of inorganic constituents of concern. Samples will be submitted for analysis of pH, electrical conductivity (EC) and sodium adsorption ratio (SAR), per Rule 915.e.(2).D.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was not encountered during site investigation activities.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

No additional source removal is proposed.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

On March 9, 2022, initial site investigation activities were performed. One soil sample was collected from the floor of the vault at 12 feet bgs to characterize potential soil impacts beneath the point of release (POR). Analytical results of POR characterization exceeded ECMC Table 915-1 Residential Soil Screening Levels (RSSLs) for SAR and arsenic. On May 10, 2022, additional release investigation was performed. Impacted soil was removed from the base of the vault to approximately 13 feet bgs. A soil sample was collected from the base. Analytical results of the soil sample exceeded Table 915-1 RSSLs for SAR, pH, and arsenic.

Additional delineation efforts were performed November 17, 2022. The excavation was advanced to a total depth of 3 feet below the vault floor, or 15 feet bgs. One soil sample was collected from the newly excavated base to characterize the vertical extent of soil impacts. Analytical results indicate compliance with Table 915-1 RSSLs except for SAR and pH. See the ROWC associated with Form 27 Document 403260849 for more details.
