Date

A release occurred on an aboveground section of Noble Midstream's Produced Water Transfer Pipeline system at approx. 8:30 PM on 3/18/24. Internal corrosion is the suspected cause though further investigation will be conducted. The night operator observed fluid leaking from the pipe and shut in the pipeline segment. A vacuum truck was dispatched and picked up approximately 10 bbls of produced water. The pipe section was dismantled on 3.19/24 and impacted soil will was excavated on 3/20/24. Confirmation soil samples have been collected and the Operator is awaiting on lab results. Results will be provided in the next Form 19-Supplemental.
