Details of Plan of Work: (State names of and expected depths to objective sands: Show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

We propose to drill this well with Rotary Tools to a projected depth of 6000 feet or through the Dakota sand. We expect to encounter the Muddy formation at approximately 5760 feet, and the Dakota sand at approximately 5840 feet. We intend to set and cement sufficient surface casing necessary to protect the hole, and to prevent encroachment of waters on oil or gas zones. In the event formations are encountered carrying oil or gas, or both, sufficient for commercial production, 7" casing will be run and cemented to the total depth.
