Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Initial sampling was conducted 12/5/2022. Analytical results indicated elevated levels at 5 of the 6 sampling locations (SP1, SP2, SP3, and SP4) for SAR, Boron, and Arsenic. Background samples were collected on 02/28/2024. The background samples were sent to the lab for SAR, Boron, and Arsenic analysis. Based on the background results, samples collected on 12/5/2022 are within the background levels for SAR, Boron, and Arsenic. The elevated Arsenic is within the Local Clean-Up levels of the background samples (1.25 x 17.8 = 22.25 mg/kg). As such, it is determined to be acceptable to leave in place. No further sampling is necessary.
