Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	15' (N-S) x 15' (E-W) x 8' bgs	Inspection/soil samples/laboratory analytical results

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Wellhead cut and cap operations were completed at the Vogl 5-8A wellhead on June 21, 2023. Groundwater was not encountered in the cut and cap excavation area. Visual inspection and field screening of soils around the well and associated pumping equipment was conducted following cut and cap operations, and a soil sample (WH-B01 @6') was collected from the base of the cut and cap excavation area, as described in a previous Form 27-Supplemental update (Document No. 403533077). Removal of the flowline associated with this wellhead was conducted on June 21, 2023 through March 12, 2024. Soil samples were collected from the locations where the flowline risers were disconnected at the wellhead (FL-B01@4') and separator (FL-B02@4'), and where the flowline changed direction (FL-B03@4', FL-B16@4', FL-B26@4', and FL-B30@4'), and were submitted for laboratory analysis to determine if a release occurred. Laboratory analytical results indicated that soil impacts were present at samples WH-B01@6', FL-B01@4', and FL-B02@4' due to the 1,2,4- and 1,3,5-TMB, TPH, PAHs, Ba, Pb, and/or pH results above ECMC standards and/or site-specific background levels (x 1.25 for metals). As such, two Form 19-Initial/Supplemental Spill/Release Reports (Document Nos. 403442749 and 403442990) were submitted on June 23 and 27, 2023, respectively, and the ECMC issued Spill/Release Point IDs 484650 and 484670, respectively. The remaining analytical results for the soil samples collected during wellhead cut and cap and flowline removal activities were in compliance with Table 915-1 standards and/or within site-specific background levels (x 1.25 for metals). Soil sample location and field screening data are presented in Table 1. Soil and analytical results are summarized in Tables 2 through 5. The soil sample and field screening locations are illustrated on Figures 1 through 3.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

On December 12, 2023, excavation activities were initiated to address remaining soil impacts at the former wellhead/flowline riser location. Soil samples have been collected from the sidewalls and base of the wellhead/flowline riser excavation area, at depths of approximately 6 and 8 feet below ground surface (bgs), respectively. Based on the waste characterization results for samples WH-B01@6', FL-B01@4', and FL-B02@4', and the ECMC-approved analyte list (Document No. 403533077), future confirmation soil samples from the wellhead/flowline riser excavation area will continue to be submitted for laboratory analysis of BTEX, TPH, TMB, PAHs, select Table 915-1 metals (As, Ba, Cd, Cu, Pb, Se), and pH. Excavation and/or site assessment activities to address remaining soil impacts at the former wellhead/flowline riser location are currently ongoing. Excavation activities to address remaining soil impacts at the former separator flowline riser location have not yet been initiated.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater has not been encountered during wellhead cut and cap, flowline removal, or subsequent over-excavation activities completed to-date. If groundwater is encountered during ongoing or pending excavation activities at the former wellhead and/or flowline riser locations, a minimum of one grab sample will be collected as soon as practical. Groundwater samples will be submitted to an accredited laboratory for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, 1,2,4- and 1,3,5-trimethylbenzene (TMB), using standard methods appropriate for detecting the target analytes in Table 915-1.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

On June 21, 2023 through March 12, 2024, soil screening was conducted at 4 sidewall locations within the cut and cap excavation area, 4 locations at the ground surface adjacent to the excavation, and 25 flowline removal pothole locations. Based on the inspection and screening results, hydrocarbon-impacted soil was not observed at the soil screening locations, and no soil samples were submitted for laboratory analysis from these areas in accordance with ECMC Operator Guidance. On July 5, 2023, a soil gas survey was conducted at 5 soil vapor points (SVP01 - SVP05) installed adjacent to the former wellhead location following cut and cap operations, as described in a previous Form 27-Supplemental update (Document No. 403533077). The laboratory analytical reports for the soil samples collected since the previous Form 27-Supp was submitted are provided as Attachment A. The field notes and a photographic log are provided as Attachment B.

SITE INVESTIGATION REPORT

SAMPLE SUMMARY

Soil

Number of soil samples collected 12

Number of soil samples exceeding 915-1 8

Was the areal and vertical extent of soil contamination delineated? No

Approximate areal extent (square feet) 225

NA / ND

-- Highest concentration of TPH (mg/kg) 2230.77

-- Highest concentration of SAR 3.63

BTEX > 915-1 No

Vertical Extent > 915-1 (in feet) 8

Groundwater

Number of groundwater samples collected 0

Was extent of groundwater contaminated delineated? Yes

Depth to groundwater (below ground surface, in feet)

Number of groundwater monitoring wells installed

Number of groundwater samples exceeding 915-1

Highest concentration of Benzene (µg/l)

Highest concentration of Toluene (µg/l)

Highest concentration of Ethylbenzene (µg/l)

Highest concentration of Xylene (µg/l)

Highest concentration of Methane (mg/l)

Surface Water

0 Number of surface water samples collected

Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Four (4) background soil samples have been collected from undisturbed native material adjacent to the wellhead cut and cap excavation area, at comparable depths and soil composition to the confirmation soil samples. The background soil samples were submitted for laboratory analysis of the Soil Suitability for Reclamation Parameters and Table 915-1 metals using standard ECMC-approved methods appropriate for detecting the target analytes in Table 915-1. Analytical results for the background soil samples are presented in Tables 4 and 5. Additional background samples may be collected, for comparison to the remaining inorganic constituent concentrations in the wellhead/flowline riser excavation area.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____

Volume of liquid waste (barrels) _____

☒ Is further site investigation required?

Excavation and/or site assessment activities to address remaining soil impacts at the former wellhead/flowline riser location are ongoing, and will be summarized in a forthcoming Form 27-Supplemental update. Excavation activities to address remaining soil impacts at the former separator flowline riser location have not yet been initiated, and will be summarized in a forthcoming Form 27-Supplemental update.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No _____

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

On December 12, 2023, approximately 30 cubic yards of impacted material were removed from the wellhead/flowline riser excavation area and transported to the Kerr-McGee Land Treatment Facility in Weld County, Colorado for recycling; approximately 10 cubic yards of impacted material were removed from the wellhead/flowline riser excavation area and transported to the Buffalo Ridge Landfill in Keenesburg, Colorado for disposal. Excavation and/or site assessment activities to address remaining soil impacts at the former wellhead/flowline riser location are ongoing, and will be summarized in a forthcoming Form 27-Supplemental update. Excavation activities to address remaining soil impacts at the former separator flowline riser location have not yet been initiated, and will be summarized in a forthcoming Form 27-Supplemental update.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Historically impacted soil remains in the former wellhead/flowline riser excavation area, and at the former separator flowline riser location, as described herein. Excavation and/or site assessment activities to address remaining soil impacts at the former wellhead/flowline riser location are ongoing, and will be summarized in a forthcoming Form 27-Supplemental update. Excavation activities to address remaining soil impacts at the former separator flowline riser location have not yet been initiated, and will be summarized in a forthcoming Form 27-Supplemental update. Future confirmation soil samples will continue to be submitted for laboratory analysis of BTEX, TPH, TMB, PAHs, select Table 915-1 metals (As, Ba, Cd, Cu, Pb, Se), and pH, based on the waste characterization results for samples WH-B01@6', FL-B01@4', and FL-B02@4', and the ECMC-approved analyte list (Document No. 403533077). Based on the analytical and soil screening data presented herein, assessment is complete at the remaining portion of the Vogl 5-8A flowline, and no further assessment activities are required in this area. Estimated time to attain NFA is TBD based on the extent of impacted soil remaining.

Soil Remediation Summary

☐ In Situ☒ Ex Situ

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

REMEDIATION PROGRESS UPDATE

PERIODIC REPORTING

Approved Reporting Schedule:

☒ Quarterly☐ Semi-Annually☐ Annually☐ Other

☐ Request Alternative Reporting Schedule:

☐ Semi-Annually☐ Annually☐ Other

Rule 913.e:

After initial approval of a Form 27, the Operator will provide quarterly update reports in a Supplemental Form 27 to document progress of site investigation and remediation, unless an alternative reporting schedule has been requested by the Operator and approved by the Director. The Director may request a more frequent reporting schedule based on site-specific conditions.

Report Type:

☐ Groundwater Monitoring☐ Land Treatment Progress Report☐ O&M Report☒ Other Remediation progress update

Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).

If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

KMOG has sufficient insurance and bonding to fully address the anticipated costs of Remediation, including the remaining estimated costs for this project. KMOG currently has over 40 million in bonds with the Colorado Energy and Carbon Management Commission. The cost for remediation is a preliminary estimate only, costs may change upwards or downward based on site-specific information. KMOG makes no representation or guarantees as to the accuracy of the preliminary estimate.

Operator anticipates the remaining cost for this project to be: \$ 12500

WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? Yes

Describe beneficial use, if any, of E&P Waste derived from this remediation project:

Approximately 30 cubic yards of impacted material have been removed from the wellhead/flowline riser excavation area and transported to the Kerr-McGee Land Treatment Facility in Weld County, Colorado for recycling.

Volume of E&P Waste (solid) in cubic yards 40

E&P waste (solid) description Impacted soil

ECMC Disposal Facility ID #, if applicable: 149007

Non-ECMC Disposal Facility: Buffalo Ridge Landfill - Keenesburg, Colorado

Volume of E&P Waste (liquid) in barrels 0

E&P waste (liquid) description

ECMC Disposal Facility ID #, if applicable:

Non-ECMC Disposal Facility:

REMEDIATION COMPLETION REPORT

REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No

If YES:

☐ Compliant with Rule 913.h.(1).

☐ Compliant with Rule 913.h.(2).

☐ Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? No

Does the previous reply indicate consideration of background concentrations?

Does Groundwater meet Table 915-1 standards? Yes

Is additional groundwater monitoring to be conducted? _____

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Following the completion of excavation and assessment activities, the site will be restored to its pre-release grade and reclaimed in accordance with ECMC 1000 Series Reclamation Rules. Timeliness of reclamation initiation and completion will be subject to NFA, surface owner discretion and land use, and suitable ground conditions which allow for execution of surface reclamation activities so as to not cause unwarranted damages.

Is the described reclamation complete? No

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim

☐ Final

Did the Surface Owner provide the seed mix? Yes

If YES, does the seed mix comply with local soil conservation district recommendations? Yes

Did the local soil conservation district provide the seed mix? No

SITE RECLAMATION DATES

Proposed date of commencement of Reclamation. 03/31/2025

Proposed date of completion of Reclamation. 04/30/2025

IMPLEMENTATION SCHEDULE

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

PRIOR DATES

Date of Surface Owner notification/consultation, if required. 06/22/2023

Actual Spill or Release date, or date of discovery. 06/22/2023

SITE INVESTIGATION DATES

Date of Initial Actions described in Site Investigation Plan (start date). 06/21/2023

Proposed site investigation commencement. 06/21/2023

Proposed completion of site investigation. 12/31/2024

REMEDIAL ACTION DATES

Proposed start date of Remediation. 12/12/2023

Proposed date of completion of Remediation. 12/31/2024

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

☐ Change from approved implementation schedule per Rule 913.d.(2).

Basis for change in implementation schedule:

OPERATOR COMMENT

Historically impacted soil remains in the former wellhead/flowline riser excavation area, and at the former separator flowline riser location, as described herein. Excavation and/or site assessment activities to address remaining soil impacts at the former wellhead/flowline riser location are ongoing, and will be summarized in a forthcoming Form 27-Supplemental update. Excavation activities to address remaining soil impacts at the former separator flowline riser location have not yet been initiated, and will be summarized in a forthcoming Form 27-Supplemental update. Future confirmation soil samples will continue to be submitted for laboratory analysis of BTEX, TPH, TMB, PAHs, select Table 915-1 metals (As, Ba, Cd, Cu, Pb, Se), and pH, based on the waste characterization results for samples WH-B01@6', FL-B01@4', and FL-B02@4', and the ECMC-approved analyte list (Document No. 403533077). Form 27-Supplemental updates will continue to be submitted to the ECMC on a quarterly basis.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
