**Photo 1.** It appears that reclamation activities have been completed in response to FIR (doc #713900055). The access road and location have been contoured and graded to reflect adjacent topography and debris has been removed. It also appears that the location and access road have been recently seeded with evidence of germination and straw crimped mulch for temporary stabilization. This location will remain "in-process" until it can be inspected at a later date.
